

Additional Findings Report

Project: Tichi Web Application

Prepared By: Deepak S

Purpose: This document contains additional observations identified during exploratory testing. These findings are separate from the mandatory defect report requested in the assignment.

Observation 1 – Password Length Validation

Module: Signup

Observation: The password field specifies a password length of 8–20 characters, but passwords longer than 20 characters are accepted.

Expected Behaviour: Passwords exceeding 20 characters should be rejected with an appropriate validation message.

Actual Behaviour: Passwords longer than 20 characters are accepted successfully.

Severity: Medium | **Priority:** P2

Observation 2 – Mobile Number Validation

Module: Signup

Observation: The mobile number field accepts Indian mobile numbers beginning with 0 or 1.

Expected Behaviour: Indian mobile numbers should begin with 6, 7, 8, or 9.

Actual Behaviour: Numbers beginning with 0 and 1 are accepted.

Severity: Medium | **Priority:** P2

Observation 3 – Chatbot Response

Module: AI Chatbot

Observation: For a valid query such as 'What is your job?', the chatbot returned 'Internal server error'.

Expected Behaviour: The chatbot should return a meaningful response to a valid user query or display a user-friendly error message if the service is unavailable.

Actual Behaviour: The chatbot displayed 'Internal server error'.

Severity: High | **Priority:** P1 (Requires confirmation if reproducible)

Note: These observations were identified during exploratory testing and are provided as additional findings. They are not part of the mandatory defect report requested in the assignment.
